TYRON[®]
TIRE BLOWOUT PROTECTION

PERSONAL SAFETY

Each year, over 20 Million Americans experience tire punctures or blowouts. Tragic accidents occur every day. Rollovers are common. Family members are killed. With Tyron[®] fitted to your vehicle, you have a much greater chance of maintaining steering, cornering and braking control so you can safely reduce your speed. Tyron[®] also helps you continue to drive on the flattened tire for a short distance to reach a safer place...off the road and out of danger. You won't get stranded with a flat tire ever again.

THE TYRON[®] PROMISE

Tyron[®] is designed to last the lifetime of your vehicle...maintenance free...and to protect vehicle wheels from damage in the event of a flat tire or a common blowout. Should a wheel become damaged, we'll repair it or replace it. Flailing tires...especially on towables...can cause wheel arch or body damage which are costly to repair. Tyron[®] helps eliminate these problems.

SAFETY & SECURITY

Tyron[®] is used by government, military, police, ambulance, emergency and fire departments all over the world. It's now available to help protect you and your family from the dangers associated with tire failure.

- Police tested and approved
- Patented blowout protection
- Proven performance
- Helps protect expensive alloy wheels

Every wheel is made with this low area or "well"

Tyron[®] is installed over the "well" to lock your tire to the wheel

An exposed well causes instability when a tire is flat

A flat tire now forms a cushion of rubber between wheel and road
